

Deepak Pandey

Front-End(React) Developer

I'm a self-taught Front-end developer and have been working from past 7 months. I work on Javascript, React, Redux, HTML, CSS, MaterialUI etc. I finished my graduation(BCA) in 2017 but unfortunately I had to start my journey as a Sales Executive at HDFC bank due to financial problems but after some time I realised that I'm at wrong place and I decided to quit that job and switch to web development. Some of my friends who were already in this field had helped and guided me in this transition. I started learning these technologies from Udemy where I found some great instructors who helped me in clearing the concepts and then I created some projects to sharp my skills and make myself industry ready.

Coding

Playing cricket

EDUCATION

M.C.R.P UNIVERSITY

Madhya Pradesh

06/2014 – 06/2017

- Bachelor of Computer Application

WORK EXPERIENCE

React Developer

I've 7 months of experience as a React developer. I've finished 5 projects using React and Redux.

CERTIFICATES

React.js (11/2019 – 12/2019)

Course from udemy

Javascript (09/2019 – 11/2019)

course from udemy

PERSONAL PROJECTS

Burger-Builder App

- This is a pure React application that i made while learning React. In this application, user can login and order burger by adding ingredients that he/she wants. And also he/she can check orders made by him/her. I used redux for state management. Technologies Used: React, Redux, Redux-Thunk, Javascript, HTML, CSS.

E-Commere-App

- This application has Customer and Admin parts. Admins can Create, Edit and Delete Products whereas Customers can View products, Add Products to Cart, Customize Cart and then Place Order after that he can also see all of his Orders History. Technologies Used: React, Redux, Redux-Persist, Redux-Thunk, Javascript, HTML, CSS, Material UI.

SpaceX Launches Dashboard

- I've used SpaceX launches API for this application. In this application, users can see Launches List and on click of any of the launches a modal will open with details of that launch. Apart from this he have 3 options to filter the data, he can see Upcoming or Past launches or can select a date range. All these filters are managed from Url so that it can be easily shared via the Url itself. Technologies Used: React, Redux, Redux-Persist, Redux-Thunk, Javascript, HTML, CSS, Material UI.

Image_search

- In this React application, I've used unsplash api to load images, users can also search images using any keyword. I've also implemented pagination using react-pagination library. Technologies Used: React, Redux-Thunk, Javascript, React-Pagination, HTML, CSS etc.
